Continuous anticipation, detection and response to potential cyberthreats

Cybersecurity is part of the digital era and is one of the current concerns of governments, businesses and citizens around the world. It would take an average of 205 days for an organization to discover that it has been hacked or breached, and another 46 days to resolve the incident from its detection.

The challenge: to continuously anticipate, monitor and respond against cyber-attacks long before they occur.

CyberThreats allows organizations to detect and respond against the different threat types. Unlike other security solutions, CyberThreats covers all phases of the cyberthreat lifecycle, based on its cyberintelligence model. Its end-to-end global view of risks provides a proactive approach focused on the early identification and effective response against cybercrime.

A cyberintelligence-based technology for proactive detection and agile response to cyberthreats

Intelligence
Applies actionable knowledge to the prevention, detection and rapid response to potential threats.

Innovation
Aggregates the internal research and expertise along with the sector’s best partners technology.

Global Vision
Proactive approach through a comprehensive and detailed view of the organization’s security status.

Anticipation
Gathering of evidence, trend analysis and threats in 24x7 against potential security risks.

Efficiency
Quick response and final resolution of the incident, mitigating the financial and reputational impact.

Benefits
- Reduces costs by early identifying and resolving potential attacks that could pose a financial and reputational impact on your organization.
- End-to-end global vision providing a proactive approach aimed at the anticipation, detection and response against cybercrime.
- 24x7 monitoring thanks to our expert team of intelligence analysts specialized in cybersecurity (CyberSOC).
- Accessibility and simplicity through an online portal offering a unified control point, centralizing all information.

Target Group

CyberThreats is designed and aimed at organizations that need protection against a wide range of cyberthreats:
- Information leaks, hacktivism, security breaches, credentials theft and other sources of business disruption.
- Unauthorized use of brand, offensive contents, counterfeits and other threats that pose irreparable damage to their image and reputation.
- Attacks derived from online fraud such as phishing, pharming, malware, carding or suspicious mobile applications.
**The problem**

Any organization can be attacked, no matter its location, size, activity sector or ethical criteria.

- 31% detect the attack internally
- 205 days to detect an incident
- 97% organizations noticed hacked or breached
- 46 days to resolve an incident
- 69% discover the attack by external means

**The solution**

*CyberThreats* protects you at all times, wherever your business is, continuously detecting and responding against threats and cybersecurity incidents.

- +99% RESOLVED Incidents
- +70% Incidents RESOLVED within <24h

**How it works**

- **Actionable intelligence:** scouting and collection of a wide range of data from public and private information sources for their further analysis, monitoring and enrichment.

- **Threat detection and incident response:** it includes all stages of the cyberthreat lifecycle, that is, the proactive identification, assessment, mitigation and eradication of attacks, finishing with a process of consolidation, continuous improvement and reporting.

- **Added value delivery** with real-time notifications on detected threats, follow-up, trend or sectorial reports, and ad hoc investigations carried out by our expert team of intelligence analysts. All of this accessible through *CyberThreats* portal and with the specialized support of our 24x7 CyberSOC team.

**Detection and Monitoring**

- **Consolidation and Improvement**
- **Evaluation and Profiling**
- **Eradication and Recovery**
- **Containment and Mitigation**

**Scouting**

- **Public**
- **Underground**
- **Internal**
- **Alliances**
- **Official**

**Data**

- **Enrichment**
- **Processing**
- **Analysis**
